

## Fortress Power & Morningstar

### Introduction:

With over four million sold since 1993, Morningstar is recognized as the expert in charging technology throughout the solar industry. As solar-plus-storage becomes more prevalent in mainstream installations, battery chemistries are becoming more advanced—and battery makers are increasingly looking for ways to help their customers maintain and protect their long-term investment.

Morningstar's *Energy Storage Partner program* (ESP) makes it possible for selected premium battery partners to offer additional value and support for their customers by offering them a more proven, better documented and controlled storage system. With energy storage typically accounting for a very large share of the overall system's cost, ESP helps advanced chemistry battery manufacturers to provide the maximum level of assurance that system owners and operators need. This document is intended to provide essential information and recommendations for integrating Morningstar charge controllers with the Energy Storage Partner's batteries. Proper integration of these products is dependent upon successful implementation of the custom settings outlined in the sections below. These settings are the result of cooperation between manufacturers and have been agreed upon by both parties.

### Battery Overview:

The High-Performance Fortress Lithium Battery is easy to install, safe, and consistently reliable. It provides the lowest lifetime energy cost for both new solar customers and retrofit customers. Fortress Lithium Battery has the industry's most advanced technology with a Battery Management System that integrates multilevel safety concepts, including overcharge and deep discharge protection, voltage and temperature observation as well as single cell monitoring and balancing.

### Key Characteristics:

- LFP is the safest Lithium-ion chemistry available—no risk of thermal runaway or fire; do not require ventilation, cooling or thermal regulation
- 98% roundtrip efficiency
- Built-in accessible DC breaker On/Off switch – increases safety and simplifies installations
- Large power capacity for easy installation
- Compatible with all industry standard inverter/charge controllers
- Drop in replacement for lead acid

Models: [LFP-10](#), [eVault 16.5](#)

Voltages: 48V

Amp Hour Capacities: 200-360Ah

**Note:** For information regarding module system configuration options, please contact the energy storage manufacturer.

**For optimal integration, the recommended settings (based on 12V nominal values) are as follows:**

**Critical Settings:**

Absorption Voltage = 13.85 V

Absorption Time = 6 min

Temperature Compensation = 0.0 V/degC (Disabled)

Float/Float Voltage/Timeout = Enable/13.60 V/30 min (Float stage not required while battery is in storage)

Equalize = Not enabled

Battery HVD/High Voltage Disconnect/Reconnect = Enable/14.20 V/13.80 V

Load LVD (Low Voltage Disconnect) ..... 12.00 V

Load LVR (Low Voltage Reconnect) ..... 13.20 V

**Note:**

Many lithium batteries include a BMS that can implement an internal battery disconnect in the event of a deep discharge to prevent permanent damage to the battery chemistry. It is important that proper low voltage load disconnect settings are used to prevent this from occurring during charging. Damage to the controller due to a battery disconnect during charging is typically not covered under warranty. Incidental damage to loads is also not covered under warranty.

**Optional Recommended Settings:**

Absorption Ext = Not enabled

Battery Service Reminder = Not enabled (Monitor Ah capacity with external shunt measurement)

Max Regulation Limit = Not enabled

Battery Current Limit = Optional (LFP-10: 80A max per battery, 50A per battery recommended/ eVault 16.5: 150A max per battery, 100A per battery recommended)

Delay Before Load LVD ..... 1 min (Possibly longer for cold temperatures)

Load Current Compensation ..... Default = 0.002 Ω (V/A), should be calculated based on 0.35/C (Reduces Load LVD based on size of load with respect to battery Ah capacity)

Load HVD/High Voltage Disconnect/Reconnect..... Enable/14.30 V/13.80 V (May help to protect loads from potentially harmful voltage spikes that can be caused by external charging sources continuing to operate during battery removal)

Battery Charge LED Indications (Not intended for accurate SoC measurement):

LED G → G/Y 75%+ = 13.30 V (3.325 V/per cell)

LED G/Y → Y 50% - 74% = 13.0 V (3.25 V/per cell)

LED Y → Y/R 25% - 49% = 12.8 V (3.2 V/per cell)

LED Y/R → R 10% or below = 12.5 V (3.125 V/per cell)

*(More information regarding these settings provided by Morningstar)*

These settings are available for the Morningstar controllers listed below:

**48V systems:**

TriStar MPPT (compatible with 12V, 24V, 36V, 48V, 60V nominal systems)

TriStar MPPT 600V (compatible with 24V, 36V, 48V and 60V nominal systems)

TriStar [PWM] (compatible with 12V, 24V, 36V and 48V nominal systems)

**Communications hardware required for programming Custom Settings with MSView:**

TriStar, TriStar MPPT, TS-MPPT-600V

Includes an RS-232 port for connection to a PC.

EMC-1 Ethernet MeterBus Converter-

Tripp Lite U209-000-R USB / Serial DB-9 (RS-232) Adapter Cable (not available from Morningstar)

All TS-MPPT-60 (150V and 600V) models also include an Ethernet port and EIA-485 port.
